

What do we do?

Mods is a digital townsquare focused on exchanging ideas and thoughts. We won't show you what we think you want to hear or see but rather challenge you to experience alternate ideas. We want you to act as a content provider as well as content moderator, hence the name "moderators".

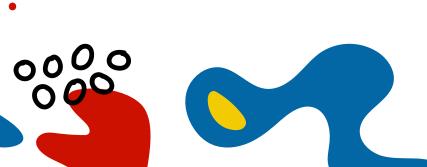

Why should you care? (I)

Modern social media networks rely on AI to keep you engaged in their products as long and as intense as possible. In our opinion AI itself is NOT a bad thing. In fact it is one of the greatest invention humans have made so far. But with this power comes a lot of responsibility and we think unleashing this kind of power on the human mind is not the way to go.

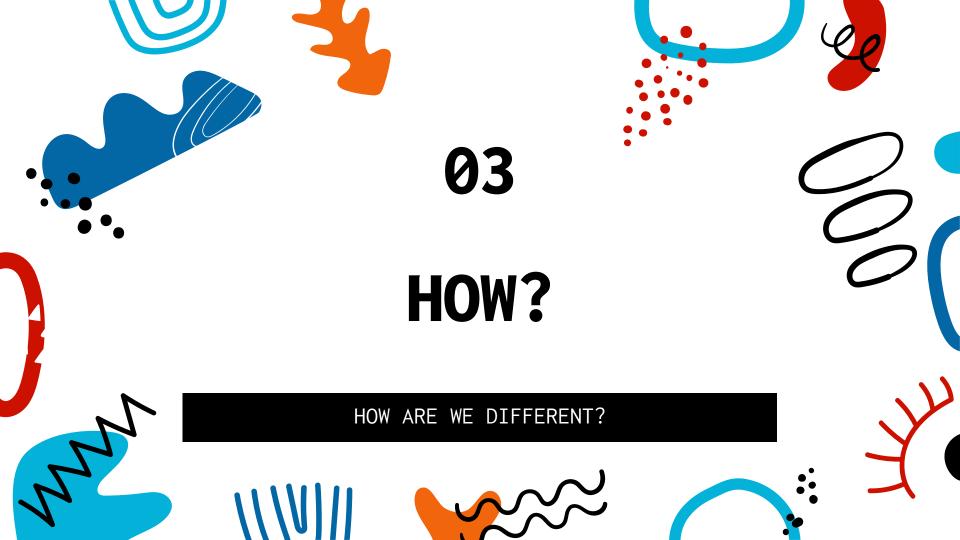

Why should you care? (II)

The use of AI with the sole purpose to keep you engaged brings up a number of problems:

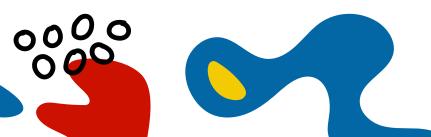

- **Echo-chambers**: You only see content fitting your views.
- Proven models performs unreasonably well:
 Use of clickbait and similar tactics are the only way to get attention
- AI dominance: AI is dominating chess for years, recently also GO. Do you want it to dominate you?

HOW ARE WE DIFFERENT?

At mods we don't use AI to constantly put things in front of you, that might keep you on our platform. We rather want you to experience different opinions and opposite views. We want our community to moderate their own content and grow to an autonomous digital society that exchanges and debates on ideas and thoughts.

4.01 NO AI, HOW?

Our algorithm just sends your post to half of your followers. Then it chooses the same amount of people at random out of all the people that do not follow you. This helps avoiding the creation of echo chambers and gets new people onto you ideas at the same time.
